Outline

- Project objective
- Cost-optimization concept
- Framework Design
- Two-phase effort

RESEARCH &
DEVELOPMENT

*Building a
scientific
foundation
for sound
environmental
decisions*

OBJECTIVE of ISMDSF

Develop methodologies and decision-support tools

for cost-effective placement of BMPs at strategic locations in urban watersheds

based on integrated data collection and hydrologic, hydraulic, and water quality modeling

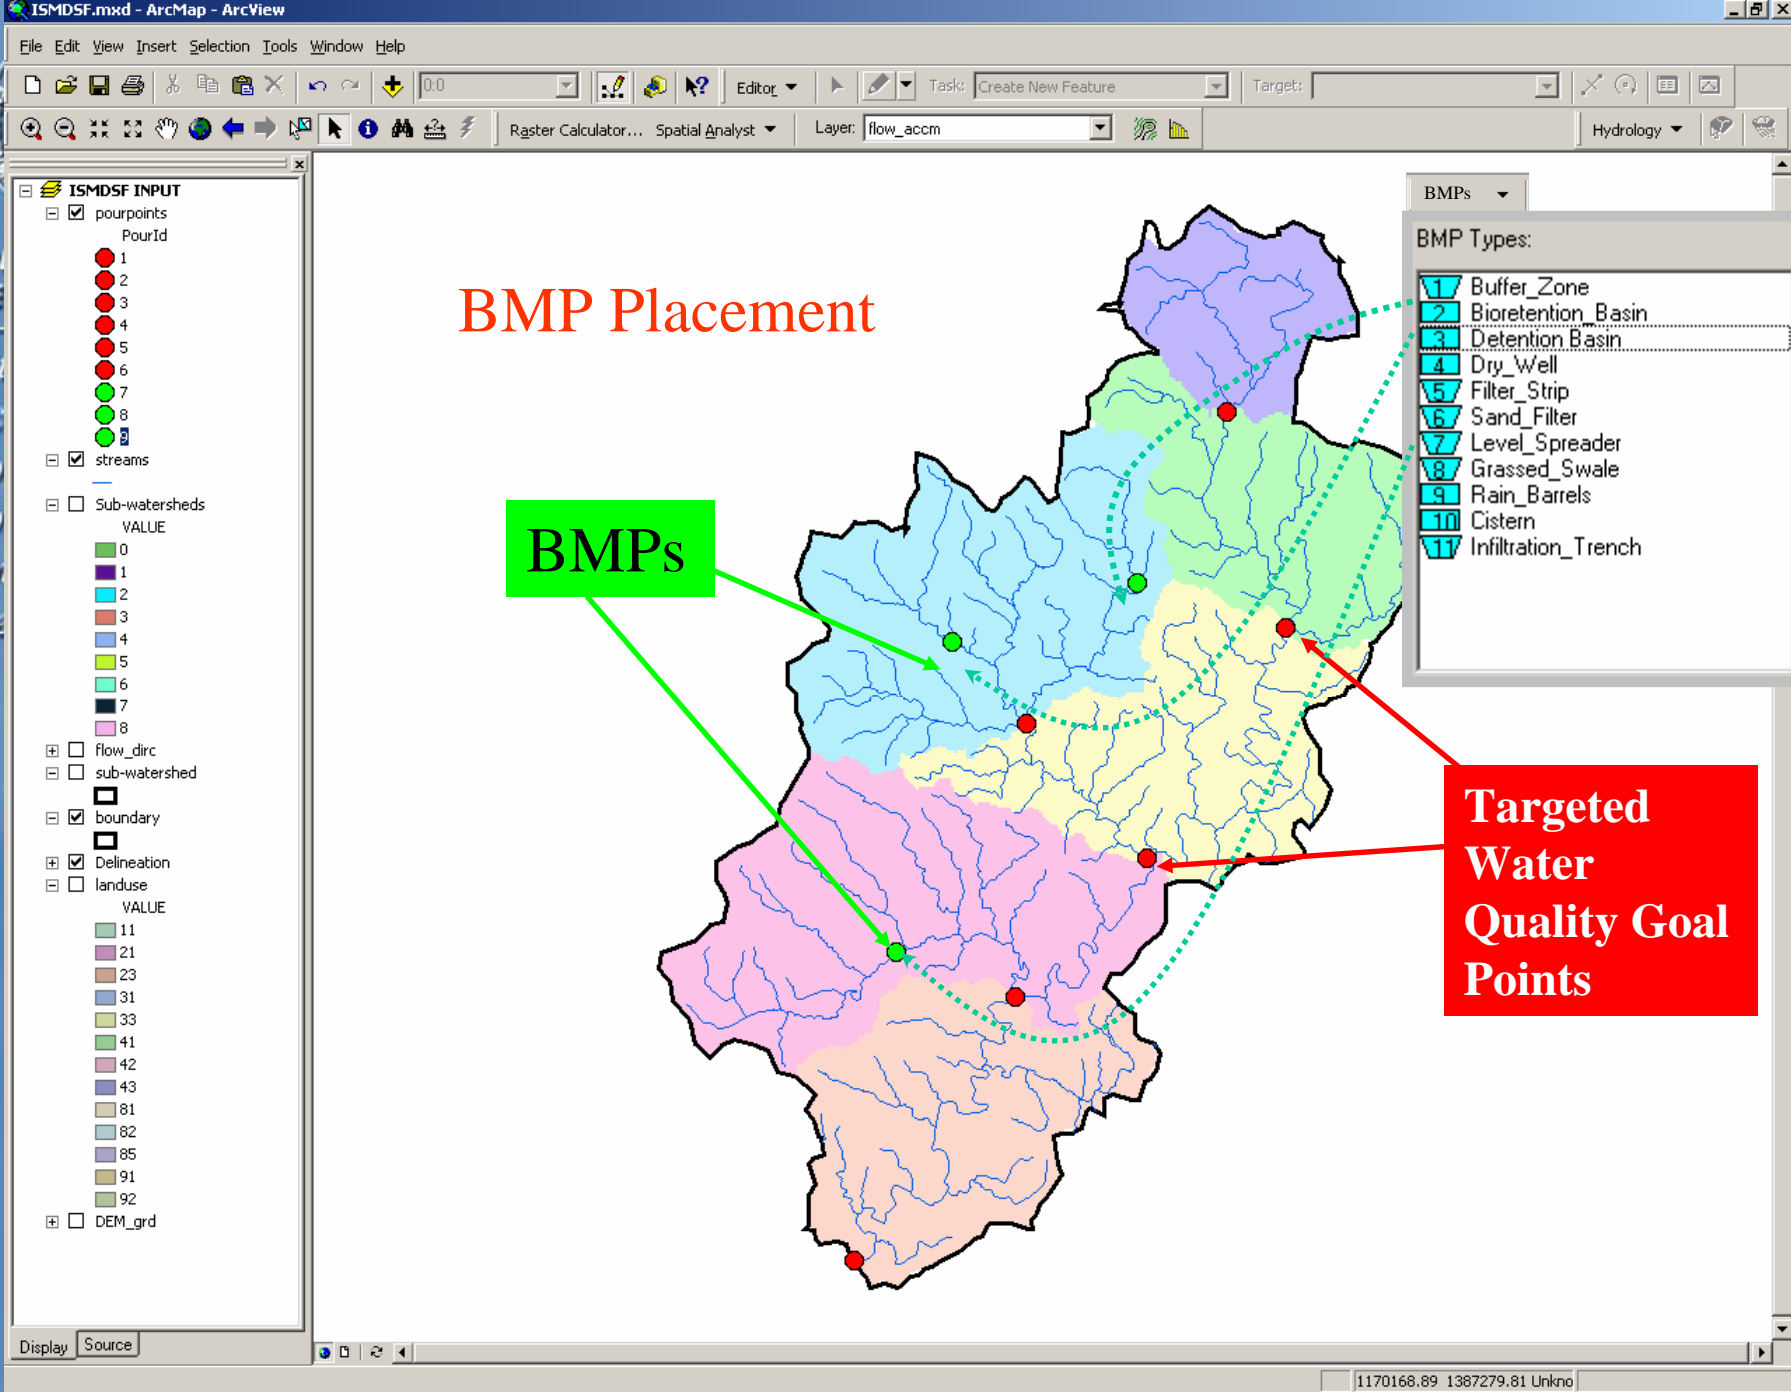

RESEARCH &
DEVELOPMENT

*Building a
scientific
foundation
for sound
environmental
decisions*

Placement Strategy

- Trade-offs
 - In a given subwatershed
 - Upstream distributed BMP/LID options
 - Downstream more regionalized wet-retention basin/wetland systems
 - Between sub-watersheds

RESEARCH &
DEVELOPMENT

*Building a
scientific
foundation
for sound
environmental
decisions*

Intended Users

- Knowledgeable model users who are familiar with the technical aspects of watershed modeling – including:
 - *Local/county government engineers/planners*
 - *Federal/state regulatory reviewers*
 - *Consulting engineers*
 - *Public concerned citizens/stakeholders*
 - *Academicians*
- Not intended for modeling neophytes.

RESEARCH &
DEVELOPMENT

*Building a
scientific
foundation
for sound
environmental
decisions*

Desired General Features of ISMDSF

- Functional capability within the framework
- Ability to link externally to existing watershed and receiving water models
- Current trends in system development
- Ability to build on the existing framework while allowing for parallel development of supporting models

RESEARCH &
DEVELOPMENT

*Building a
scientific
foundation
for sound
environmental
decisions*

Design Requirements of ISMDSF

- Oriented for knowledgeable model users
- Include GIS for BMP strategic placement and selection
- Applicable to mixed land use urban watersheds
- Include hydrologic/hydraulic/water quality process modeling
- Able to compare cost-effectiveness of alternatives

RESEARCH &
DEVELOPMENT

*Building a
scientific
foundation
for sound
environmental
decisions*

BMP Placement at Various Spatial Levels

(a) On-site BMPs

(b) Sub-regional BMPs

(c) Regional BMPs

Comparisons of Modeling Frameworks

RESEARCH &
DEVELOPMENT

*Building a
scientific
foundation
for sound
environmental
decisions*

•BASINS

- Large-mid size watershed
- Primarily Rural
- Mixed land uses
- Limited BMPs
- River/simple lake
 - Steady state river
 - 1-D routing

• TMDL Toolbox

- Large-mid size watersheds
- Primarily Rural
- Mixed land uses
- Limited BMPs
- River/lake/estuary
 - Hydrodynamic
 - Water quality
- Extensions
 - Sediment
 - Mercury

•ISMDSF

- Mid-small watersheds
- Urban
 - Sewer Routing (SWMM)
- Mixed land uses
- BMP simulation
 - Placement
 - Optimization
- Receiving water
 - 1-D stream routing within the watershed
 - External linkage to river/lake/estuary models

RESEARCH &
DEVELOPMENT

*Building a
scientific
foundation
for sound
environmental
decisions*

Comparisons of Modeling Frameworks

•BASINS

- Large-mid size watershed
- Primarily Rural
- Mixed land uses
- Limited BMPs
- River/simple lake
 - Steady state river
 - 1-D routing

• TMDL Toolbox

- Large-mid size watersheds
- Primarily Rural
- Mixed land uses
- Limited BMPs
- River/lake/estuary
 - Hydrodynamic
 - Water quality
- Extensions
 - Sediment
 - Mercury

•ISMDSF

- Mid-small watersheds
- Urban
 - Sewer Routing (SWMM)
- Mixed land uses
- BMP simulation
 - Placement
 - Optimization
- Receiving water
 - 1-D stream routing within the watershed
 - External linkage to river/lake/esutary models

Framework Manager

- The *command center* of ISMDSF
- Establishes the modeling network from GIS database
- Calls ISMDSF components (watershed and BMP modules, post-processor, optimization engine) as needed
- Provides feedback to all components
- Uses Visual Basic programming language

RESEARCH &
DEVELOPMENT

*Building a
scientific
foundation
for sound
environmental
decisions*

Watershed Model Processes

Land Surface and Subsurface

- Surface Runoff Simulation
 - Rainfall Runoff/Infiltration
 - Erosion
- Subsurface Hydrology
 - Baseflow/Interflow
 - Soil moisture conditions
- Water Quality
 - Surface pollutant accumulation & wash-off
 - Subsurface pollutant transformation
 - Transport from surface & subsurface

Routing

*To Pipe,
Stream,*

RESEARCH &
DEVELOPMENT

*Building a
scientific
foundation
for sound
environmental
decisions*

Routing

*From
Land*

Watershed Model Processes

Pipe/Channel Routing and Transport

- Urban Stormwater Routing
 - Sewer network definition
 - Conduit transport/overflow/bypass
 - Intermediate storage
- Natural Channel Routing
 - Reach routing network
 - Land-to-Land (stream buffer)
- Instream Water Quality
 - Pollutant delivery to conduit/channel
 - Instream pollutant transformation

*Time-
series*

*Flow &
WQ*

RESEARCH &
DEVELOPMENT

*Building a
scientific
foundation
for sound
environmental
decisions*

Stand-alone Watershed Models – mostly from SWMM

- **Land** – watershed/landscape runoff simulation
- **BMP** – process simulation of a BMP
- **Conduit** – flow and pollutant routing through a conduit network
- **Reach** – flow and pollutant routing through an open channel network

RESEARCH &
DEVELOPMENT

*Building a
scientific
foundation
for sound
environmental
decisions*

BMP Simulation

- Input time series (from land simulation)
- BMP process simulation (occurs at nodes)
- Based on the current Prince George's County BMP Model
 - Structural BMP
 - Class A – storage/detention
 - Class B – open channel
 - Non-structural BMP
 - Represented at the land-simulation stage

RESEARCH &
DEVELOPMENT

*Building a
scientific
foundation
for sound
environmental
decisions*

ArcGIS Interface

- Serves as the system interface (What the user sees)
- Access GIS functions through a series of menus, buttons, and dialog boxes:
 - Parcel delineation
 - Network generation
 - Read/edit spatial and tabular data sets
- Dynamic interaction with other components
- Visual Basic programming language with ArcObjects
- Required software: ArcView 8 and Spatial Analyst

RESEARCH &
DEVELOPMENT

*Building a
scientific
foundation
for sound
environmental
decisions*

Optimization

- Problem formulation
 - Objectives & constraints
 - Evaluation factors & assessment points
 - Potential BMP types and locations
- Solution techniques
 - Scatter search
 - Genetic algorithm

RESEARCH &
DEVELOPMENT

Building a
scientific
foundation
for sound
environmental
decisions

Optimization

Feasible Option Matrix

Potential Location	BMP types	BMP configuration		
1 (0-1)	A, B, C...	Depth	Surface area	...
2 (0-1)	A, B, C...	Depth	Surface area	...

RESEARCH &
DEVELOPMENT

*Building a
scientific
foundation
for sound
environmental
decisions*

Database

- Microsoft Access database
- Seamlessly integrated with GIS Interface
- Data management platform for spatially associated features
- Interaction/data exchange with other components
- Required software: MS Access or Microsoft Access Driver

RESEARCH &
DEVELOPMENT

*Building a
scientific
foundation
for sound
environmental
decisions*

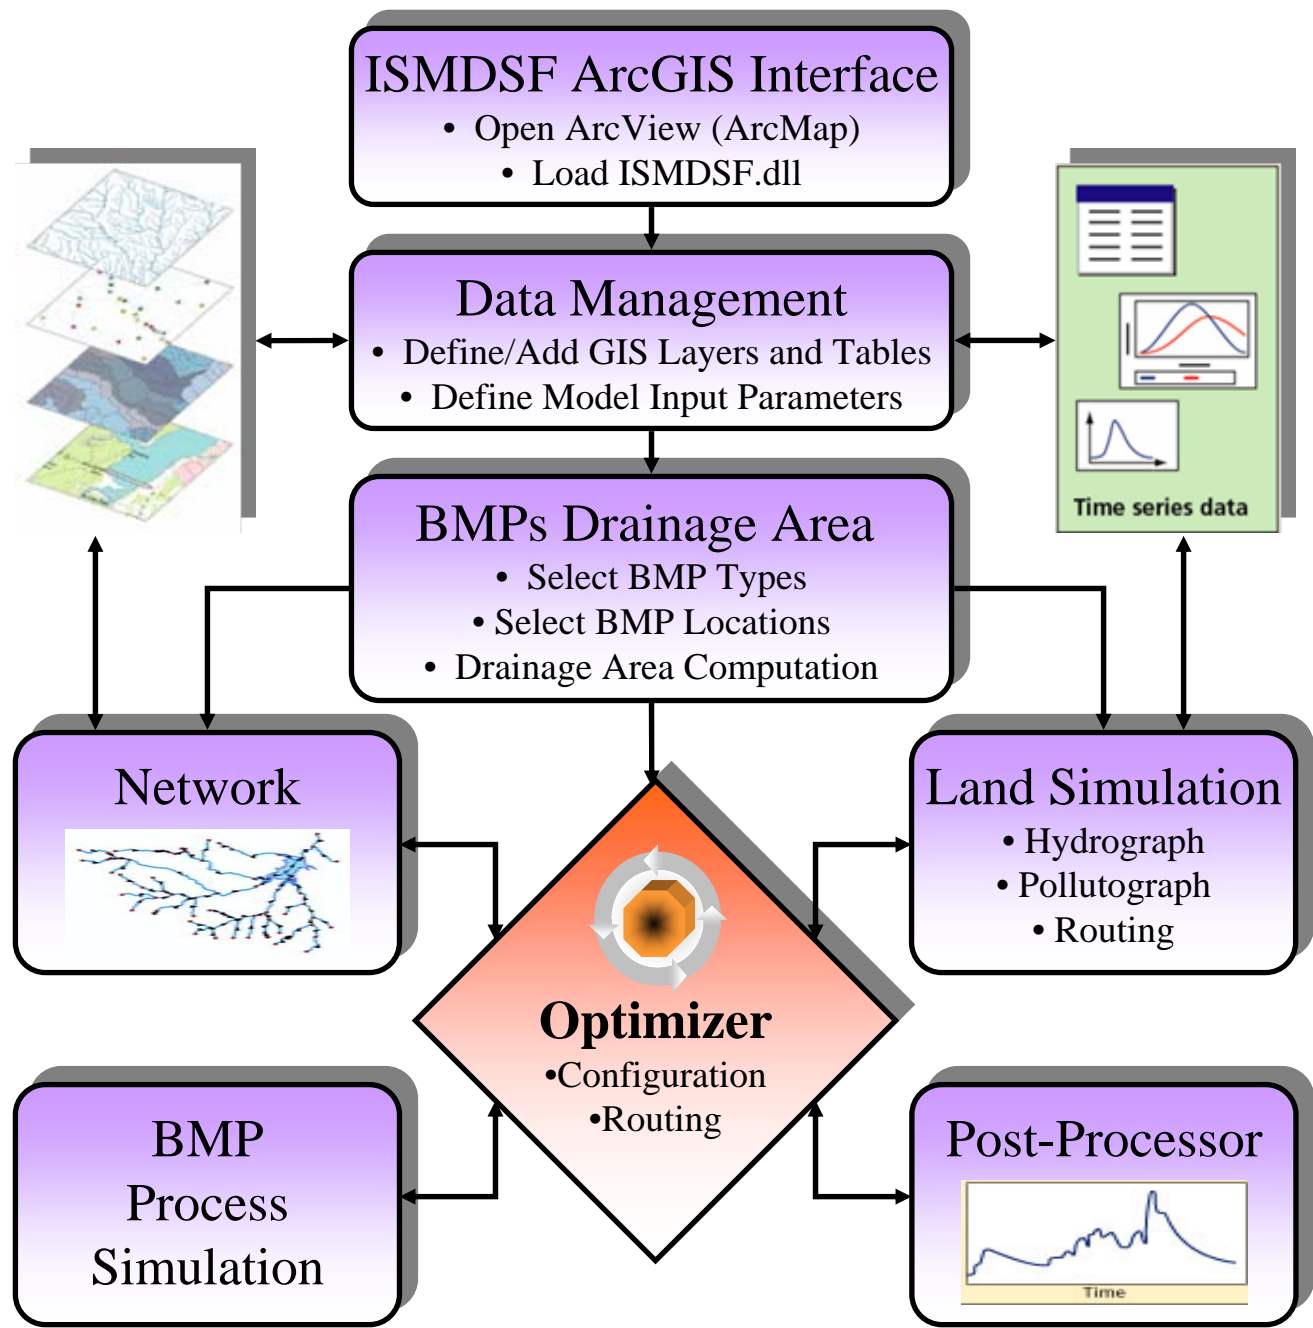

Post-Processor

- Results visualization and tabulation
- Scenario comparison and analysis
- Summary results and statistics
- Seamless integration with ISMDSF components
- Accessible through the ArcGIS interface
- VBA macro programming language
- Required software: MS Excel

RESEARCH &
DEVELOPMENT

*Building a
scientific
foundation
for sound
environmental
decisions*

RESEARCH &
DEVELOPMENT

*Building a
scientific
foundation
for sound
environmental
decisions*

Phase 1

•Interface

- GIS linkage for placement of BMPs
- GIS based network development capabilities

• Cost

- Basic cost categories as part of the optimization framework
- User can enter cost basis data for BMPs

•Simulation

- Simulation of land, BMPs, and flow network
- Support for a suite of BMPs including detention, retention, filtration, and buffers
- Ability to manually set up and evaluate scenarios with various BMP placement and selection options
- Case study application demonstrating system utility

RESEARCH &
DEVELOPMENT

*Building a
scientific
foundation
for sound
environmental
decisions*

Phase 2

• **Interface**

- Enhanced GIS linkage
- Enhanced functions to setup management options and provide automatic iterations
- Visualization of BMP placement options
- Broadened output processing and GIS displays

• **Cost**

- Expanded database
- Cost functions for additional innovative and nonstructural BMPs

• **Simulation**

- Development and testing of the [optimization component](#)
- Expanded suite of BMPs
- System evaluation with new BMP components
- Application and evaluation of ISMDSF in multiple geographic settings

RESEARCH &
DEVELOPMENT

*Building a
scientific
foundation
for sound
environmental
decisions*
